## Chapter 7. Metadata Quality Measurement and Improvement Exercises

Printer friendly  
version (PDF)

1. Search a digital library (e.g., nsdl.org) using different queries (e.g., "mars", "mars exploration", "Volcano World").
  - If there are duplicate records, analyze and determine whether they are true duplicates.
  - Also examine all records and compare these records describing the same resource.
2. Write a well-structured, brief report about your findings.
  - Attach the records that you corrected or enhanced, and mark your corrections or additions on the original records.
